BACKEND AI ENGINEERING CURRICULUM AND INTERNSHIP PLAN

Build reliable server-side AI systems (retrieval, structured output, and eval harnesses) that survive real use.

API contracts: Define endpoints, payloads, status states, and error responses before implementation.

Task design and prompting: Turn an ambiguous AI idea into a specific job with boundaries, schemas, and success criteria.

Retrieval and grounding: Add source context when needed and evaluate whether the answer is actually supported.

Evaluation and operations: Build a lightweight rubric, handle auth and retries, and document what you would monitor in production.
